

The **MOVEMENT JOINT** has been specially created to relieve the stress in prestige floors (marble, granite, ceramic tiles or wood) laid on a mortar bed. The joint is simply inserted by hand and is levelled with a plastic hammer. It is available in brass and stainless steel with internal vulcanised expanded EPDM gasket. Strong, practical and top quality. Lay the joints according with the standards in force.

Insert available in the colours: G - N - B (White, Ivory and Brown available on demand with a minimum quantity order of 500 lm). The code of the selected finish must be added to the article code. E.g.: GAC 20... (chosen insert colour grey) GAC 20G.

EXAMPLES AND INSTRUCTIONS FOR LAYING METHODS

1. Choose the colour and the necessary height of the joint, calculating the thickness of the finished floor and the thickness of the screed.
2. Insert the joint into the screed letting it protrude slightly.
3. Proceed with laying the floor, aligning it with the rigid vertical part of the joint.
4. Complete laying by levelling the joint with the rigid part with the floor.
5. Using the mortar, grout the gap between the tiles and the profile.

This **DOUBLE SILICONE JOINT** is a co-extruded profile in hard and soft PVC. The double internal silicone provides a high degree of resistance to any type of compressive stress, heavy loads and foot traffic. The extension is designed to lengthen the joint, extending it to the total depth of auxiliary or insulation castings as required. Lay the joints according with the standards in force.
