

Improve the appearance of streets and premises

Reduce the cost of chewing gum removal

You don't have to remove something that isn't there!!

Introduction

The cost of removing chewing gum is huge and has always been portrayed as a battle that cannot be won.

UK Council's alone spend in excess of £150 Million per annum cleaning chewing gum off pavements, only to see the problem re-occur and costs escalate further.

Apply 4Earth Gum Stopper and there is simply no need to remove chewing gum because it simply is no longer there!!

4Earth Gum Stopper acts as a repellent to chewing gum and will ensure that walkway areas stay cleaner for much, much longer.

4Earth Gum Stopper will also repel dirt, bird droppings, moss, oil, grease and most other contaminants including industrial pollutants.

An eco friendly solution used by organisations such as London Underground, 4Earth Gum Stopper will greatly reduce cleaning costs with reductions in excess of 90% reported.

Adding Chewing gum repellent to your services can increase the likelihood of you receiving chewing gum removal work because you have a total solution.

Offer your clients 4Earth Gum Stopper before your competitor beats you to it.

Used by and at

Airports, Car Parks, City Centre streets, Forecourts, Sports Stadia, Pubs and Clubs. Public event areas Theme Parks, Train Stations, Leisure Centres, Schools, Colleges and Universities.

Years of protection!

Years of protection from chewing gum and other contaminants such as:

Water	Oil
Grease	Airborne dirt
Acid Rain	Smog
Moss	Bird Droppings
Dust	And many more!

Pavement before treatment with Gum Stopper

The same pavement 6 months after treatment with Gum Stopper

Performance and Durability

Dependant on footfall Gum stopper can last for years before re-application may be required. In heavier areas it is recommended that a second application is carried out around 12 months after the first.

In a recently treated area in North Tyneside (UK) the heaviest area was treated and six months later only one piece of gum had settled on the area and was lightly taken off (see video at <http://www.4earthsolutions.com/products/gum-stopper>)

The area had stayed remarkably clean due to the stain resistance properties of the product and its ability to withstand many other contaminants.

17 months later half a dozen pieces of gum had settled and again were lightly removed by a sweeper.

During the test period North Tyneside Council did not attempt to remove the gum from the area and we acknowledge and thank North Tyneside Council for its co-operation in proving how effectively 4Earth Gum Stopper repels chewing gum.

Specifications

Temperature for application	Minimum 5°C
Odour	N/A
Cure Rate	As soon as dry
Slip Resistance	No change
UV Resistance	Impregnator (not a coating)
Shelf Life	Consult 4Earth Solutions technical team
Packaging	25 Litres
Freight Specification	N/A

Easy, Fast and Profitable to apply

Remove chewing gum from the area

Ensure the area is dry and then apply 4Earth Gum Stopper with a roller or brush. In certain circumstances the solution can be sprayed on.

One litre covers 8 – 10 square metres
This faster application means more productivity, happier staff and, for your customers a safer more pleasant environment without the need to spend wasted revenue on chewing gum removal.

For further advice and guidance please see our "Application Method guide" or contact our Technical team at info@4earthsolutions.com.

Works perfectly on:

Marble	Limestone
Terracotta	Roof Tiles
Slate	Paving Stones
Concrete	Brick
Block Paving	Sandstone
Granite	Pavements
